<u>Hifi Diagrams: Ideas from class used</u>
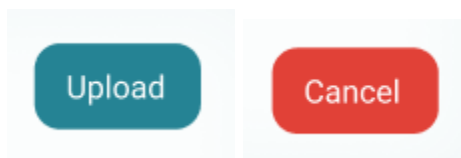

Understandability/Discovery

- Pages are simple, easy to understand

- Navigation is simple, you can see all available pages in the navigation bar

Forcing functions

- Interlock: "Confirm password" on sign up page

- Where there are cancel and save buttons: the cancel button is the one that is
  automatically highlighted

Affordances and Signifiers

- Icon usage such as home icon in the navigation bar and the search icons on the search
  bar indicate the functionality of said features.

- Digital affordances with the implementation of button designs that encapsulate an
  intuitive user interaction. For example the use of red buttons for the cancel buttons.

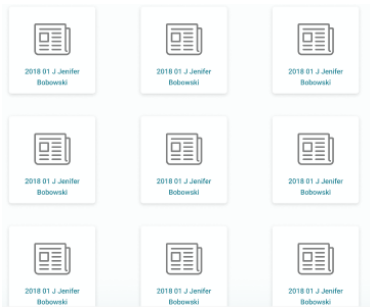

- Signifiers such as drop down menus remained uniform throughout their implementation

- Signifiers are also employed in the buttons where only the currently active buttons are
  highlighted--different colour.

- Thumbnail calendar included as an overview alert system to upcoming events that
  affords the user to expand towards a larger more detailed page.

Gestalt

- Symmetry was utilized within the web pages as a means of creating a balanced feel on pages with multiple contents such as the file upload, governance page and so on.

- An attempt was made to utilize white space to emphasize positive versus negative space control and create a strong distinction between the elements and the background. Active white space was also used to increase the readability of text in the titles.
